                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1080
```

The present invention describes a variant of an Erwinia-type creatinase (I) modified relative to a wild-type creatinase having creatinase activity. The variant comprises at least one amino acid substitution at aposition of the fully defined 404 amino acid sequence given in ABR43467: these are selected from N130, M203, I278, I1304 and F395. Creatinase has the EC number EC 3.5.3.3 and is also known as creatine amidinohydrolase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Also described is a reagent (II) for determining creatine comprising the Erwinia-type creatinase variant. The variant is useful for determining creatinine and/or creatine concentration in a sample. Measuring creatinine and creatine are useful for diagnosing uraemia, chronic nephritis, acute nephritis, gigantism, tonic muscular dystrophy and some other related diseases. The mutant enzymes have improved stability, lower conductivity and/or lower Km-values for creatine: they are much better suited to detection methods for creatine. The present sequence encodes a mutant Erwinia creatinase from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1212 BP; 240 A; 394 C; 358 G; 220 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Erwinia sp.
Synthetic.
New variant of an Erwinia-type creatinase modified relative to a wild-type creatinase having creatinase activity, useful for determining creatinine and/or creatine concentration in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               gene;

The present invention describes a variant of an Erwinia-type creatinase CC (I) modified relative to a wild-type creatinase having creatinase activity. The variant comprises at least one amino acid substitution at a position of the fully defined 404 amino acid sequence given in ABR43467: these are selected from N130, M203, I278, I1304 and F395. Creatinase has CC these are selected from N130, M203, I278, I1304 and F395. Creatinase has CC the EC number EC 3.5.3.3 and is also known as creatine amidinohydrolase. CC Also described is a reagent (II) for determining creatine comprising the CC creatinine and/or creatinase variant. The variant is useful for determining CC creatinine and/or creatine concentration in a sample. Measuring CC creatinine and/or creatine are useful for diagnosing uraemia, chronic nephritis, acute nephritis, gigantism, tonic muscular dystrophy and some CO cher related diseases. The mutant enzymes have improved stability, lower conductivity and/or lower Xm-values for creatine; they are much better suited to detection methods for creatine. The present sequence encodes a cutant Erwinia creatinase from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

CC The present invention describes a variant of an Erwinia-type creatinase CC (I) modified relative to a wild-type creatinase having creatinase CC activity. The variant comprises at least one amino acid substitution at a CC position of the fully defined 404 amino acid sequence given in ABR43467; CC these are selected from N130, M203, IZ78, I1304 and F395. Creatinase has CC the EC number EC 3.5.3.3 and is also known as creatine amidinohydrolase. CC Also described is a reagent (II) for determining creatine comprising the CC Erwinia-type creatinase variant. The variant is useful for determining CC creatinine and/or creatine concentration in a sample. Measuring CC creatinine and creatine are useful for diagnosing uraemia, chronic CC comparist, acute nephritis, gigantism, tonic muscular dystrophy and some CC conductivity and/or lower Km-values for creatine; they are much better suited to detection methods for creatine. The present sequence encodes a CC mutant Erwinia creatinase from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a variant of an Erwinia-type creatinase (C (I) modified relative to a wild-type creatinase having creatinase c activity. The variant comprises at least one amino acid substitution at a position of the fully defined 404 amino acid sequence given in ABR43467: C these are selected from N130, M203, I278, I1304 and F395. Creatinase has the EC number EC 3.5.3.3 and is also known as creatine amidinohydrolase. CC Also described is a reagent (II) for determining creatine amidinohydrolase. CC Erwinia-type creatinase variant. The variant is useful for determining c creatinine and/or creatine concentration in a sample. Measuring CC creatinine and creatine are useful for diagnosing urasemia, chronic c nephritis, acute nephritis, gigantism, tonic muscular dystrophy and some CC conductivity and/or lower Km-values for creatine: they are much better CC suited to detection methods for creatine. The present sequence encodes a content Erwinia creatinase from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a variant of an Erwinia-type creatinase (I) modified relative to a wild-type creatinase activity. The variant comprises at least one amino acid substitution at a position of the fully defined 404 amino acid sequence given in ABR43467: these are selected from N130, M203, I2798, I1304 and 2935. Creatinase has the EC number EC 35.3 and is also known as creatine amidinohydrolase. Also described is a reagent (II) for determining creatine comprising the Erwinia-type creatinase variant. The variant is useful for determining creatinine and/or creatine concentration in a sample. Measuring creatinine and/or creatine are useful for diagnosing uraemia, chronic nephritis, acute nephritis, gigantism, tonic muscular dystrophy and some other related diseases. The mutant enzymes have improved stability, lower conductivity and/or lower Km-values for creatine: they are much better sulted to detection methods for creatine. The present sequence encodes a mutant transfer for the present sequence encodes a

Sequence 58, Application US/09475515A

Patent No. 6602705

GENERAL INFORMATION:
APPLICANT: BARNETT, Susan
APPLICANT: TZUR MEGEDE, Jan
APPLICANT: LIAN, Ying
APPLICANT: LIAN, Ying
APPLICANT: LIAN, Ying
APPLICANT: LIAN, Ying
APPLICANT: SELBY, Mark
APPLICANT: SELBY, Mark
APPLICANT: GREER, Catherine
APPLICANT: SELBY, Mark
APPLICANT: MALKER, Christopher
TITLE OF INVENTION: IMPROVED EXPRESSION OF HIV POLYPEPTIDES AND PRODUCTION
TITLE OF INVENTION: OF VIRUS-LIKE PARTICLES
FILE REFERENCE: 1621.002
CURRENT APPLICATION NUMBER: US/09/475,515A
CURRENT APPLICATION NUMBER: US/09/475,515A
CURRENT APPLICATION NUMBER: US/09/475,515A
CURRENT APPLICATION NUMBER: US/09/475,515A
CURRENT APPLICATION STEEL 1999-12-30
NUMBER OF SEQ ID NOS: 90
SOFTMARE: Patentin Ver. 2.0
SEQ ID NO 58
LENGTH: 2181
TYPE: DNA
ORGANISM: Artificial Sequence
PEATURE:
OTHER INFORMATION: Description of Artificial Sequence: gpl40TM.modUS4
US-09-475-515-58
